Puneet

Software Engineer | Full-Stack Developer (MERN / Next.js)
+91-9306131708 | puneetpanwar4004@gmail.com | LinkedIn | GitHub | Portfolio

EDUCATION

VIT Bhopal University **2023 – 2027**
Bachelor of Technology, Computer Science and Engineering (AI & ML) Bhopal, Madhya Pradesh
CGPA: 8.85 /10
Coursework: DSA, OOP, Operating Systems, DBMS, Computer Networks

EXPERIENCE

Frontend Developer Intern – S3B Global **May 2026 – Aug 2026**
- Shipped S3B Global's production website end-to-end (Next.js, TypeScript, Tailwind CSS), building the homepage, service pages, a WordPress-integrated blog, and the Contact and Careers pages from scratch.
- Root-caused a silent contact-form failure in production (Node runtime incompatible with Hostinger's hosting) and redesigned the email pipeline around an n8n workflow to fix it.
- Fixed intermittent blog page failures caused by slow WordPress API responses by adding timeout handling and a static fallback so the page always renders.
- Built an email-OTP authentication flow and multi-language support for Kundli Time, an AI astrology platform, using n8n for OTP/SMTP automation.

Project Intern – AICTE TechSaksham (Microsoft & SAP CSR Initiative) **Dec 2024 – Feb 2025**
- Built a human pose estimation system that detects body keypoints (shoulders, elbows, knees, ankles) from images and video using OpenCV and a deep-learning-based keypoint detector.
- Implemented real-time skeletal tracking across video frames, extending the system beyond single-image pose detection to continuous motion.
- Deployed the system with a Streamlit interface for image/video input and visualization; published both pipelines (image and video) on GitHub.

SKILLS

Languages: C++, Python, JavaScript, TypeScript, SQL
Frontend: React.js, Next.js, Tailwind CSS, HTML, CSS
Backend: Node.js, Express.js, FastAPI, Socket.io
Databases: MongoDB, MySQL
Automation & Tools: n8n, MCP, Git, GitHub, Postman, Vercel

PROJECTS

MedAI – AI-Powered Full-Stack Healthcare Platform — GitHub **Feb 2026 – Jun 2026**
Next.js, Node.js (Socket.io), FastAPI, PyTorch, Docker, NextAuth.js v5
- Built 3 ML features: a Random Forest model to classify symptoms, an NLTK-based chatbot, and a PyTorch (MobileNetV2) model to read chest X-rays.
- Designed a multi-part system – Next.js frontend, Node.js chat server, and a FastAPI backend in Docker – with real-time doctor-patient chat and role-based access control.
- Set up the Docker build to train ML models at deploy time on Render, keeping the app lightweight and deployments reliable.

Zerodha Trading Platform Clone – Full-Stack Web App — GitHub **Nov 2025 – Jan 2026**
MongoDB, Express, React, Node.js, JWT, Chart.js, Bootstrap
- Built a MERN app with two frontends – a public site and a separate trading dashboard – with JWT login and REST APIs for holdings, positions, and orders.
- Added real-time profit/loss tracking and charts (Chart.js), with MongoDB storing user profiles, positions, and order history.
- Built a responsive UI (Bootstrap) with protected routes and a buy/sell order popup with live watchlist actions.

Digital Wallet & P2P Payment Engine — GitHub **Jun 2026 – Aug 2026**
Node.js, Express, PostgreSQL, JWT, Bcrypt, Docker
- Built a digital wallet system where users can register, add money, check real-time balance, and transfer funds to other users using their email ID.
- Handled money transfers using database transactions, making sure money is deducted and credited together so balance never gets lost if a network error occurs.
- Added user authentication and security using JWT tokens for login sessions, Bcrypt for password protection, and clean input validation to block malicious inputs.
